CASE STUDY · META ADS · PAID TRAFFIC · 2026

RAWDEE GLAMPING · HOSPITALITY · INDONESIA

Same budget. Less than half the cost per lead.

From a tangled 34-campaign account on a broken signal to a clean, full-stack setup: tracking, structure, testing system and launch.

−56%
Cost per lead vs the previous 30 days

3.7×
Link clicks that became WhatsApp chats

40%
Below the client's CPL target

34→3
Campaigns: two themes plus one test lab

META ADS · META PIXEL · CONVERSIONS API · ACCOUNT STRUCTURE · CREATIVE STRATEGY

PREPARED BY

Muhammad Hasan Fikri

Meta Ads · Creative Strategy · Tracking

WHAT I OWN

— Pixel + Conversions API
— Account structure & naming
— Budget & KPI math
— Creative strategy & testing

01 The brief

"We keep spending on Meta, but leads are expensive and we can't tell which creative is actually working."

CONTEXT

Rawdee Glamping sells stays through WhatsApp. Every Meta campaign drives people to a landing page whose job is one click: open a chat. The account had grown campaign by campaign since May, with a new structure each month.

The goal was simple to say and hard to hit: **more WhatsApp leads at or below Rp20,000 each**, on a fixed daily budget.

LAST 30 DAYS, BEFORE

Rp27.5k Cost per lead	**1.25%** Link click → WhatsApp
44% Spend at ~Rp52.5k CPL	**0** Ad sets delivering

THE DIAGNOSIS · WHY MORE BUDGET WOULD NOT FIX IT

CRITICAL	**Optimising on the wrong signal.** The pixel sent WhatsApp clicks as Purchase, so Meta was learning from sales that never happened.
CRITICAL	**Delivery stopped.** A payment error halted every ad set. Seven days dark resets the learning phase.
HIGH	**Four dimensions mixed on one level.** Theme, creative angle, format and content source were all used to split campaigns and ad sets, so nothing could be compared.
HIGH	**Budget spread too thin.** Six ad sets shared Rp250k/day; none could exit learning. New creator ad sets got almost no spend.
MEDIUM	**No way to learn from creative.** Winners and losers ran side by side with no rule for when to scale, kill or retest.

THE ACCOUNT BEFORE · 16 AD SETS ACROSS 3 ERAS OF NAMING

Off...	Ad set	Results	Reach	Frequency	Cost per result	Budget	Amount spent	Ends	Schedule	Impressio...
	WFC_COLD_JABODETABEK			1.29	Rp11,166 Per lead	Using campaign...		Ongoing	6 Oct 2026–Ongoing	
	PROOF-OF-FEELING_COLD_JABODETAB...			1.29	Rp12,913 Per lead	Using campaign...		Ongoing	6 Oct 2026–Ongoing

02 Fix the signal first

An ad account is only as smart as the events it learns from. Before touching a single campaign, I rebuilt the tracking underneath it.

01 AUDIT
Find the fake
WhatsApp click mislabelled as Purchase; foreign domains in the dataset

02 PIXEL
Rebuild in GTM
Native template, standard events, unique event ID on every hit

03 CAPI
Add the server
Meta-enabled CAPI, switched on only after hygiene

04 OPTIMISE
Point ads at Lead
New campaigns optimise on the clean Lead event

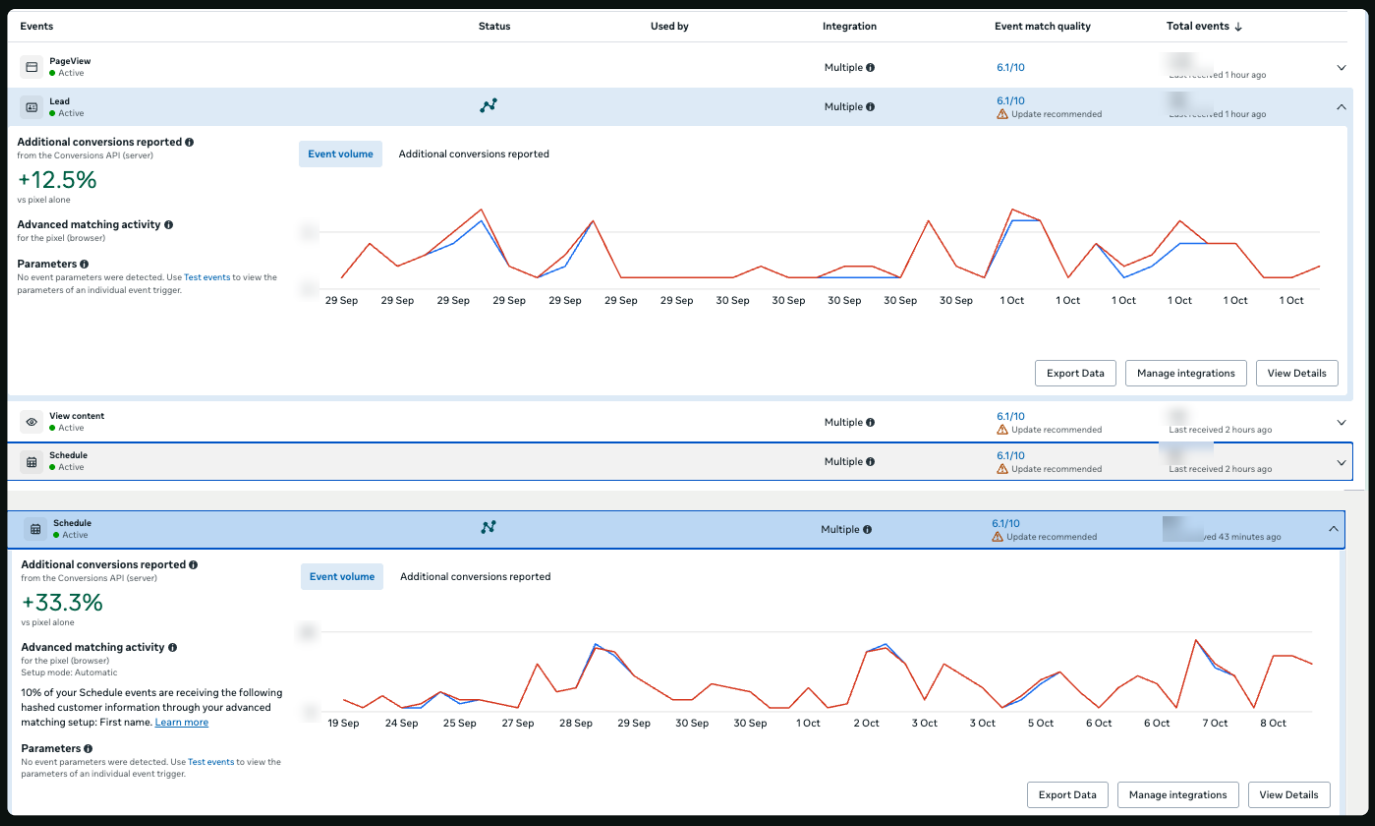

USER ACTION	BEFORE	AFTER	USED FOR
Click WhatsApp	Purchase ×	Lead	Campaign optimisation
Open booking calendar	ViewContent	Schedule	High-intent audience
Open pricelist	ViewContent	ViewContent	Retargeting

+12.5%
Lead events recovered by the server

100%
Browser + server deduplicated

94.6%
Events carrying the ad click ID, from 45.5%

CONVERSIONS API · EXTRA LEAD AND SCHEDULE EVENTS REPORTED BY THE SERVER

03 Plan with numbers, not hope

I worked backwards from revenue to a CPL ceiling, then let that number decide how many ad sets the budget could actually feed.

BUDGET	LEADS	BOOKINGS	PLANNED ROAS
Rp300k	**450**	**63**	**13.3×**
per day, 30 days	at CPL ≤ Rp20k	at 14% closing	ad cost = 7.5% of revenue

The constraint that shaped the account: each ad set needs about Rp143k/day to exit learning, so the budget supports two main ad sets, not six.

NAMING SYSTEM · ONE LEVEL, ONE VARIABLE

LEVEL	FORMULA	SPLITS BY
Campaign	`GLAMPING_[THEME]_[OBJ-DEST]_[YYMM]`	Promo theme
Ad set	`[ANGLE]_[FUNNEL]_[LOCATION]`	Creative angle
Ad	`[CODE]_[FORMAT]-[TITLE]_[SOURCE]_[VERSION]`	Format & content source

ACCOUNT STRUCTURE

CAMPAIGN · CBO · RP150K/DAY

`WEEKEND-STAY_LEADS-LPWA`

AD SET

PROOF-OF-FEELING_COLD

3 proven ads · UGC, creator, in-house

CAMPAIGN · CBO · RP150K/DAY

`WEEKDAY-STAY_LEADS-LPWA`

AD SET

WFC_COLD (work from camp)

5 proven ads · storytelling, problem-solution

TEST LAB · ABO · RP40K/DAY

`TEST-CREATIVE_LEADS-LPWA`

FROM DAY 15

Batch 1: test angle → Batch 2: test source

One variable per 14-day batch

GRADUATE

≥3 leads at CPL ≤ Rp20k → moves to its main ad set, batched once every 14 days.

KILL

0 leads after Rp40k spend → off, and its code is never reused.

TESTING ROADMAP · 42 DAYS

Day 1–14

Run the proven

Two themes, no edits days 1–7

Day 15–28

Test the angle

3 angles, one source

Day 29–42

Test the source

Winning angle × UGC, creator, in-house

30-DAY PROJECTION

CAMPAIGN	LEADS
Weekend stay	199–233
Weekday · work from camp	233–273
Test lab	±26
Total → 64–74 bookings	**458–532**

04 Launch without losing history

Proven ads were carried over, not rebuilt, so the new account started with creative that already had a track record.

LAUNCH CHECKLIST

01 Clear the payment error

02 Confirm the Lead event as the optimisation goal

03 Check copy and URL on all 9 carried ads

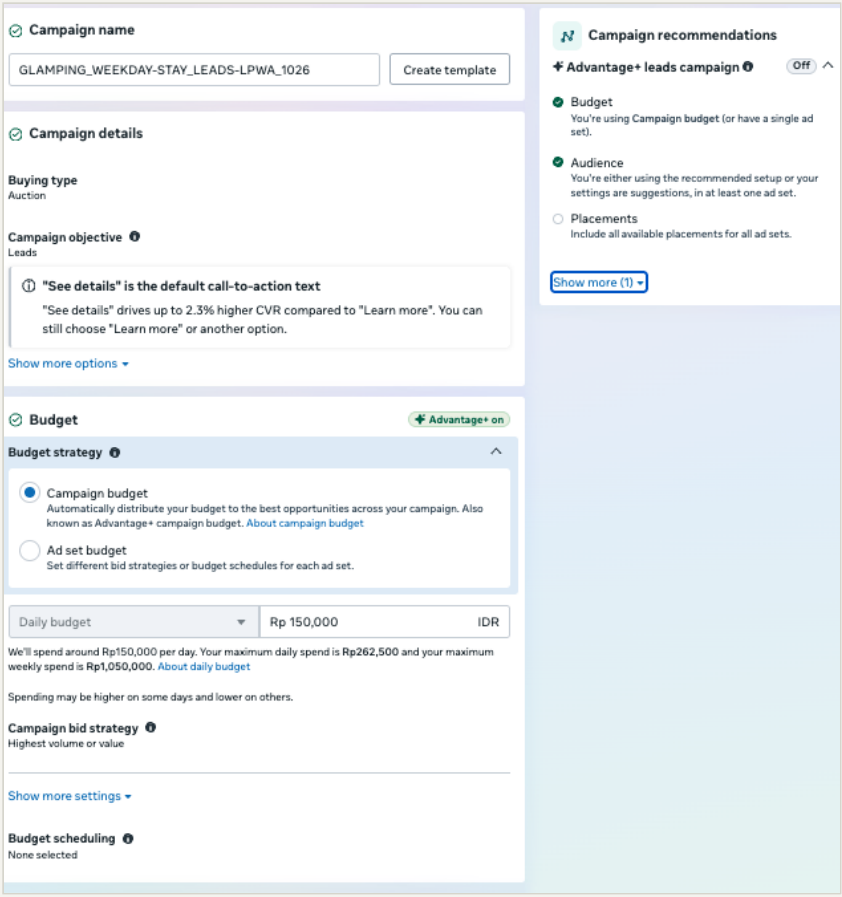

04 Duplicate the winning ad sets, then rename

05 Add UTM parameters to every ad

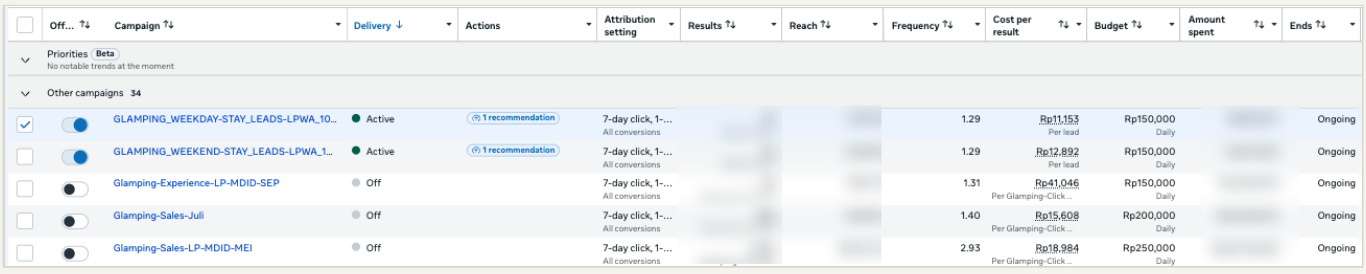

06 Switch old off, new on, the same day

07 No edits on days 1–7

05 First results

Read from Meta Ads Manager after the first 72 hours live, 6–8 October 2026, during the no-edit window.

BEFORE · COST PER LEAD, PREVIOUS 30 DAYS **Rp27,545**

CLIENT TARGET **Rp20,000**

AFTER · BLENDED COST PER LEAD, NEW CAMPAIGNS **Rp11,974**

METRIC	BEFORE	AFTER
Cost per lead	Rp27,545	**Rp11,974 · −56%**
Link click → WhatsApp	1.25%	**4.65% · 3.7×**
CPL by campaign	Rp15.6k – Rp41.0k	**Rp11.2k weekday · Rp12.9k weekend**
Best ad	—	**WFC_02_STORYTELLING · Rp9.5k CPL**
Optimisation signal	Fake Purchase	**Lead, browser + server**

WHAT'S WORKING

Proven creative plus a clean signal: both campaigns beat the target from day one, without new ads.

READ WITH CARE

Three days is early and both campaigns are still in learning. The test lab opens on day 15 to keep the pipeline fed.

06 The full stack, in one engagement

Most ad accounts fail below the campaign level. I work from the signal up.

01	**Brief & diagnosis**	30-day account audit, root causes ranked by severity
02	**Pixel + CAPI**	Clean standard events, server path, 100% dedup
03	**KPI math**	Revenue → bookings → leads → CPL ceiling → ad set count
04	**Structure & naming**	One variable per level, readable by anyone on the team
05	**Creative strategy**	Select, test and read the client's creative; brief what gets made next
06	**Launch & reporting**	Same-day switchover, UTMs, no-edit window, weekly reads

WHAT I CAN DO FOR YOUR BUSINESS

Ad account audit
Find where the budget leaks before you scale it.

Pixel + CAPI setup
Give the algorithm signals it can trust.

Account rebuild
Structure, naming and budget that make results comparable.

Creative strategy
You bring the creative; I make it earn and brief the next winner.

Fix the signal. Then spend.
